Overall summary

Letter from the Chief Inspector of General Practice

We carried out an announced comprehensive inspection at Bere Regis Surgery on 18 August 2016. Overall the practice is rated as good.

Our key findings across all the areas we inspected were as follows:

- There was an open and transparent approach to safety and an effective system in place for reporting and recording significant events.
- Risks to patients were assessed and well managed.
- Staff assessed patients' needs and delivered care in line with current evidence based guidance. Staff had been trained to provide them with the skills, knowledge and experience to deliver effective care and treatment.
- Patients said they were treated with compassion, dignity and respect and they were involved in their care and decisions about their treatment.
- Information about services and how to complain was available and easy to understand. Improvements were made to the quality of care as a result of complaints and concerns.

- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- There was a clear leadership structure and staff felt supported by management. The practice proactively sought feedback from staff and patients, which it acted on.
- The provider was aware of and complied with the requirements of the duty of candour.

We saw one area of outstanding practice:

The practice healthcare assistant (HCA) had identified 383 patients over the age of 75 years that were vulnerable and to date had carried out 170 assessments on the most vulnerable and isolated. These assessments were an evolving process and included identifying need in housing, physical health, mental health and social need and associated risks such as risk of falls or poor nutrition using a nationally recognised tool. The HCA liaised with dentists, opticians, housing departments and the practice

Summary of findings

GPs where areas of concern were identified. The practice also worked closely with local organisations to provide social events and lunch clubs. This initiative had reduced the hospital admissions for this age group by 33%.

Professor Steve Field (CBE FRCP FFPH FRCGP)
Chief Inspector of General Practice

Summary of findings

The five questions we ask and what we found

We always ask the following five questions of services.

Are services safe?

The practice is rated as good for providing safe services.

- There was an effective system in place for reporting and recording significant events
- Lessons were shared to make sure action was taken to improve safety in the practice.
- When things went wrong patients received reasonable support, truthful information, and a written apology. They were told about any actions to improve processes to prevent the same thing happening again.
- The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse.
- Risks to patients were assessed and well managed.

Good

Are services effective?

The practice is rated as good for providing effective services.

- Data from the Quality and Outcomes Framework (QOF) showed patient outcomes were at or above average compared to the national average.
- Staff assessed needs and delivered care in line with current evidence based guidance.
- Clinical audits demonstrated quality improvement.
- Staff had the skills, knowledge and experience to deliver effective care and treatment.
- There was evidence of appraisals and personal development plans for all staff.
- Staff worked with other health care professionals to understand and meet the range and complexity of patients' needs.

Good

Are services caring?

The practice is rated as good for providing caring services.

- Data from the national GP patient survey showed patients rated the practice higher than others for several aspects of care.
- Patients said they were treated with compassion, dignity and respect and they were involved in decisions about their care and treatment.
- Information for patients about the services available was easy to understand and accessible.
- We saw staff treated patients with kindness and respect, and maintained patient and information confidentiality.

Good

Summary of findings

Are services responsive to people's needs?

The practice is rated as good for providing responsive services.

- Practice staff reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group to secure improvements to services where these were identified.
- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- Information about how to complain was available and easy to understand and evidence showed the practice responded quickly to issues raised. Learning from complaints was shared with staff and other stakeholders.

Good

Are services well-led?

The practice is rated as good for being well-led.

- The practice had a clear vision and strategy to deliver high quality care and promote good outcomes for patients. Staff were clear about the vision and their responsibilities in relation to it.
- There was a clear leadership structure and staff felt supported by management. The practice had a number of policies and procedures to govern activity and held regular governance meetings.
- There was an overarching governance framework which supported the delivery of the strategy and good quality care. This included arrangements to monitor and improve quality and identify risk.
- The provider was aware of and complied with the requirements of the duty of candour. The partners encouraged a culture of openness and honesty. The practice had systems in place for notifiable safety incidents and ensured this information was shared with staff to ensure appropriate action was taken.
- The practice proactively sought feedback from staff and patients, which it acted on. The patient participation group was active.
- There was a strong focus on continuous learning and improvement at all levels.

Good

Summary of findings

The six population groups and what we found

We always inspect the quality of care for these six population groups.

Older people

The practice is rated as outstanding for the care of older people.

- The practice offered proactive, personalised care to meet the needs of the older people in its population.
- The practice was responsive to the needs of older people, and offered home visits and urgent appointments for those with enhanced needs.
- The practice healthcare assistant (HCA) had also identified 383 patients over the age of 75 years that were vulnerable and had carried out 170 assessments on the most vulnerable and isolated. These assessments were an evolving process and included identifying need in housing, physical health, mental health and social need and associated risks such as risk of falls or poor nutrition using a nationally recognised tool. The HCA liaised with dentists, opticians, housing departments and the practice GPs where areas of concern were identified. The practice also worked closely with local organisations to provide social events and lunch clubs. This initiative had reduced the hospital admissions for this age group by 33%.

Outstanding

People with long term conditions

The practice is rated as good for the care of people with long-term conditions.

- Nursing staff had lead roles in chronic disease management and patients at risk of hospital admission were identified as a priority.
- Nationally reported data from the Quality and Outcomes Framework showed that outcomes for patients were good for patients with long term conditions. For example, patients diagnosed with hypertension whose last blood pressure reading measured in the preceding 12 months was 150/90mmHg or less was 87% which was better than the national average of 84%.
- Longer appointments and home visits were available when needed.
- All these patients had a named GP and a structured annual review to check their health and medicines needs were being met. For those patients with the most complex needs, the named GP worked with relevant health and care professionals to deliver a multidisciplinary package of care.

Good

Summary of findings

Families, children and young people

The practice is rated as good for the care of families, children and young people.

- There were systems in place to identify and follow up children living in disadvantaged circumstances and who were at risk, for example, children and young people who had a high number of A&E attendances. Immunisation rates were relatively high for all standard childhood immunisations.
- Patients told us that children and young people were treated in an age-appropriate way and were recognised as individuals, and we saw evidence to confirm this.
- The percentage of women aged 25-64 whose notes record that a cervical screening test has been performed in the preceding five years was 80%, which was comparable to the national average of 82%.
- Appointments were available outside of school hours and the premises were suitable for children and babies.
- We saw positive examples of joint working with midwives, health visitors and school nurses.

Good

Working age people (including those recently retired and students)

The practice is rated as good for the care of working-age people (including those recently retired and students).

- The needs of the working age population, those recently retired and students had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care.
- The practice was proactive in offering online services as well as a full range of health promotion and screening that reflects the needs for this age group.

Good

People whose circumstances may make them vulnerable

The practice is rated as good for the care of people whose circumstances may make them vulnerable.

- The practice held a register of patients living in vulnerable circumstances including homeless people, travellers and those with a learning disability.
- The practice offered longer appointments for patients with a learning disability.
- The practice regularly worked with other health care professionals in the case management of vulnerable patients.
- The practice informed vulnerable patients about how to access various support groups and voluntary organisations.

Good

Summary of findings

- Staff knew how to recognise signs of abuse in vulnerable adults and children. Staff were aware of their responsibilities regarding information sharing, documentation of safeguarding concerns and how to contact relevant agencies in normal working hours and out of hours.

People experiencing poor mental health (including people with dementia)

The practice is rated as good for the care of people experiencing poor mental health (including people with dementia).

- 90% of patients diagnosed with dementia who had their care reviewed in a face to face meeting in the last 12 months, which was higher than the national average of 84%
- The percentage of patients with schizophrenia, bipolar affective disorder and other psychoses who had a comprehensive, agreed care plan documented in the record, in the preceding 12 months (01/04/2014 to 31/03/2015) was 100% which was above the national average of 88%.
- The practice regularly worked with multi-disciplinary teams in the case management of patients experiencing poor mental health, including those with dementia.
- The practice carried out advance care planning for patients with dementia.
- The practice had told patients experiencing poor mental health about how to access various support groups and voluntary organisations.
- The practice had a system in place to follow up patients who had attended accident and emergency where they may have been experiencing poor mental health.
- Staff had a good understanding of how to support patients with mental health needs and dementia.

Good

Summary of findings

What people who use the service say

The national GP patient survey results were published in January 2016. The results showed the practice was performing in line with local and national averages. 232 survey forms were distributed and 118 were returned. This represented about 3% of the practice's patient list.

- 95% of patients found it easy to get through to this practice by phone compared to the national average of 73%.
- 85% of patients were able to get an appointment to see or speak to someone the last time they tried compared to the national average of 76%.
- 90% of patients described the overall experience of this GP practice as good compared to the national average of 85%.
- 78% of patients said they would recommend this GP practice to someone who has just moved to the local area compared to the national average of 79%.

As part of our inspection we also asked for CQC comment cards to be completed by patients prior to our inspection. We received 14 comment cards which were all positive about the standard of care received. Comments included patients were treated politely, professionally and promptly. Staff are helpful and attentive.

We spoke with four patients during the inspection. All four patients said they were satisfied with the care they received and thought staff were approachable, committed and caring. The practice participated in the friends and families survey which asked patients how likely they were to recommend the practice to friends and family. The results for July 2016 showed that of 101 responses 93 patients would recommend the practice with 74 (73%) being extremely likely.

Outstanding practice

- The practice healthcare assistant (HCA) had identified 383 patients over the age of 75 years that were vulnerable and to date had carried out 170 assessments on the most vulnerable and isolated. These assessments were an evolving process and included identifying need in housing, physical health, mental health and social need and associated risks such as risk of falls or poor nutrition

using a nationally recognised tool. The HCA liaised with dentists, opticians, housing departments and the practice GPs where areas of concern were identified. The practice also worked closely with local organisations to provide social events and lunch clubs. This initiative had reduced the hospital admissions for this age group by 33%.

Bere Regis Surgery

Detailed findings

Our inspection team

Our inspection team was led by:

Our inspection team was led by a CQC Lead Inspector. The team included a GP specialist adviser, and a pharmacist inspector.

Background to Bere Regis Surgery

The Bere Regis Surgery was inspected on Thursday 18 August 2016. This was a comprehensive inspection.

The practice is situated in the village of Bere Regis in Dorset. The practice provides a general medical service in a rural area to 3,500 patients living within an eight mile radius of the practice.

The practice's population is in the eight decile for deprivation, which is on a scale of one to ten. The lower the decile the more deprived an area is compared to the national average. The practice population ethnic profile is predominantly White British with 31% of the practice list aged over 60 years. The average male life expectancy for the practice area is 82 years which is higher than the national average of 79 years; female life expectancy is 86 years which is higher than the national average of 83 years.

There are two GP partners, one female and one male, with one female salaried GP providing 18 GP sessions each week. The GP partners hold managerial and financial responsibility for running the business. The team are supported by a practice manager, two practice nurses, a healthcare assistant, a healthcare assistant/phlebotomist (Phlebotomists are people trained to take blood samples) and additional administration and reception staff.

The practice has dispensing facilities for patients who live more than a mile away from a dispensing chemist. The dispensary is open during surgery times. A delivery driver is available to ensure medicines reach isolated patients promptly.

The practice reception is open between 8am and 6.30pm Monday to Friday. Booked appointments are offered between 8.30am to 1pm and 2pm to 6pm. The practice offers a range of appointment types including book on the day, telephone consultations and advance appointments. Extended hours are offered on a Monday and Thursday evenings and Monday and Wednesday mornings.

Outside of these times patients are directed to contact the out of hours service by using the NHS 111 number.

The practice has a General Medical Services (GMS) contract with NHS England.

The Bere Regis Surgery provides regulated activities from the main site at Manor Farm Road, Wareham, Dorset BH20 7HB

Why we carried out this inspection

We carried out a comprehensive inspection of this service under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. The inspection was planned to check whether the provider is meeting the legal requirements and regulations associated with the Health and Social Care Act 2008, to look at the overall quality of the service, and to provide a rating for the service under the Care Act 2014.

Detailed findings

How we carried out this inspection

Before visiting, we reviewed a range of information we hold about the practice and asked other organisations to share what they knew. We carried out an announced visit on 18 August 2016. During our visit we:

- Spoke with a range of staff including two GPs, a nurse, a healthcare assistant, the practice manager, dispensing staff and administrative staff and spoke with patients who used the service and two members of the patient participation group (PPG).
- Observed how patients were being cared for and talked with carers and/or family members
- Reviewed an anonymised sample of the personal care or treatment records of patients.
- Reviewed 14 comment cards where patients and members of the public shared their views and experiences of the service.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?

- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

We also looked at how well services were provided for specific groups of people and what good care looked like for them. The population groups are:

- Older people
- People with long-term conditions
- Families, children and young people
- Working age people (including those recently retired and students)
- People whose circumstances may make them vulnerable
- People experiencing poor mental health (including people with dementia).

Please note that when referring to information throughout this report, for example any reference to the Quality and Outcomes Framework data, this relates to the most recent information available to the CQC at that time.

Are services safe?

Our findings

Safe track record and learning

There was an effective system in place for reporting and recording significant events.

- Staff told us they would inform the practice manager of any incidents and there was a recording form available on the practice's computer system. The incident recording form supported the recording of notifiable incidents under the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when things go wrong with care and treatment).
- We saw evidence that when things went wrong with care and treatment, patients were informed of the incident, received reasonable support, truthful information, a written apology and were told about any actions to improve processes to prevent the same thing happening again.
- The practice carried out a thorough analysis of the significant events.

We reviewed safety records, incident reports, patient safety alerts and minutes of meetings where these were discussed. We saw evidence that lessons were shared and action was taken to improve safety in the practice. For example, following an incident where incorrect equipment was found in a GP visiting bag a new protocol for listing standard equipment and medicines was devised. This protocol also included naming the responsible person for the checking of the efficiency of this equipment.

Overview of safety systems and processes

The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse, which included:

- Arrangements were in place to safeguard children and vulnerable adults from abuse. These arrangements reflected relevant legislation and local requirements. Policies were accessible to all staff. The policies clearly outlined who to contact for further guidance if staff had concerns about a patient's welfare. There was a lead member of staff for safeguarding. The GPs attended safeguarding meetings when possible and always provided reports where necessary for other agencies.

Staff demonstrated they understood their responsibilities and all had received training on safeguarding children and vulnerable adults relevant to their role. GPs were trained.

- A notice in the waiting room advised patients that chaperones were available if required. All the staff at the practice who could act as chaperones were trained for the role and had received a Disclosure and Barring Service (DBS) check. (DBS checks identify whether a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable).
- The practice maintained appropriate standards of cleanliness and hygiene. We observed the premises to be clean and tidy. The practice nurse was the infection control clinical lead who liaised with the local infection prevention teams to keep up to date with best practice. There was an infection control protocol in place and staff had received up to date training. Recent hand washing training had recently taken place. Annual infection control audits were undertaken, the most recent in April 2016, and we saw evidence that action was taken to address any improvements identified as a result.
- The arrangements for managing medicines, including emergency medicines and vaccines, in the practice kept patients safe (including obtaining, prescribing, recording, handling, storing, security and disposal). Processes were in place for handling repeat prescriptions which included the review of high risk medicines. The practice carried out regular medicines audits, with the support of the local CCG pharmacy teams, to ensure prescribing was in line with best practice guidelines for safe prescribing. Blank prescription forms and pads were securely stored and there were systems in place to monitor their use. Patient Group Directions had been adopted by the practice to allow nurses to administer medicines in line with legislation. Health Care Assistants were trained to administer vaccines and medicines against a patient specific prescription or direction from a prescriber.
- There was a named GP responsible for the dispensary and all members of staff involved in dispensing medicines had received appropriate training and had opportunities for continuing learning and development. Any medicines incidents or 'near misses' were recorded

Are services safe?

for learning and the practice had a system in place to monitor the quality of the dispensing process. Dispensary staff showed us standard procedures which covered all aspects of the dispensing process (these are written instructions about how to safely dispense medicines).

- The practice held stocks of controlled drugs (medicines that require extra checks and special storage because of their potential misuse) and had procedures in place to manage them safely. There were also arrangements in place for the destruction of controlled drugs.
- The practice was able to provide pharmaceutical services to those patients on the practice list who lived more than one mile (1.6km) from their nearest pharmacy premises. The practice had arranged a delivery service for some patients to have their dispensed medicines delivered to their homes, and suitable records were maintained.
- Some medicines were made up into blister packs to help people with taking their medicines, and safe systems were in place for dispensing and checking these.
- We reviewed four personnel files and found appropriate recruitment checks had been undertaken prior to employment. For example, proof of identification, references, qualifications, registration with the appropriate professional body and the appropriate checks through the Disclosure and Barring Service.

Monitoring risks to patients

Risks to patients were assessed and well managed.

- There were procedures in place for monitoring and managing risks to patient and staff safety. There was a health and safety policy available with a poster in the reception office which identified local health and safety representatives. The practice had up to date fire risk assessments and carried out regular fire drills, the last

taking place in April 2016. All electrical equipment was checked in May 2016 to ensure the equipment was safe to use and clinical equipment was also checked in May 2016 to ensure it was working properly. The practice had a variety of other risk assessments in place to monitor safety of the premises such as control of substances hazardous to health and infection control and legionella (Legionella is a term for a particular bacterium which can contaminate water systems in buildings).

- Arrangements were in place for planning and monitoring the number of staff and mix of staff needed to meet patients' needs. There was a rota system in place for all the different staffing groups to ensure enough staff were on duty.

Arrangements to deal with emergencies and major incidents

The practice had adequate arrangements in place to respond to emergencies and major incidents.

- There was an instant messaging system on the computers in all the consultation and treatment rooms which alerted staff to any emergency.
- All staff received annual basic life support training and there were emergency medicines available in the treatment room.
- The practice had a defibrillator available on the premises and oxygen with adult and children's masks. A first aid kit and accident book were available.
- Emergency medicines were easily accessible to staff in a secure area of the practice and all staff knew of their location. All the medicines we checked were in date and stored securely.

The practice had a comprehensive business continuity plan in place for major incidents such as power failure or building damage. The plan included emergency contact numbers for staff.

Are services effective?

(for example, treatment is effective)

Our findings

Effective needs assessment

The practice assessed needs and delivered care in line with relevant and current evidence based guidance and standards, including National Institute for Health and Care Excellence (NICE) best practice guidelines.

- The practice had systems in place to keep all clinical staff up to date. Staff had access to guidelines from NICE and used this information to deliver care and treatment that met patients' needs.
- The practice monitored that these guidelines were followed through risk assessments, audits and random sample checks of patient records.

Management, monitoring and improving outcomes for people

The practice used the information collected for the Quality and Outcomes Framework (QOF) and performance against national screening programmes to monitor outcomes for patients. (QOF is a system intended to improve the quality of general practice and reward good practice). The most recent published results were 98% of the total number of points available.

This practice was not an outlier for any QOF (or other national) clinical targets. Data from 2014/2015 showed:

- Performance for diabetes related indicators was 85% which were better than the CCG average of 80% and the national average of 78%.
- Performance for mental health related indicators was 100% which was better than the CCG average of 92% and the national average of 88%.

There was evidence of quality improvement including clinical audit.

Clinical audits were carried out to demonstrate quality improvement and all relevant staff were involved to improve care and treatment and people's outcomes. The audits included significant event audits, infection control audits, minor practice and medicine audits such as, medicines that used to treat conditions that affect the bones. The audit was carried out to ensure that patients were also receiving another medicine that is required. The first audit demonstrated that not all

patients were receiving this medicine. Patients were invited into the practice for the relevant discussions with the GP and to be prescribed this medicine. A second audit cycle was completed and findings showed that all but one of the patients was prescribed the additional medicine as they preferred to buy over the counter equivalents. The patient had been invited into the practice to discuss the suitability of the supplements bought.

The practice participated in local audits, national benchmarking, accreditation, peer review and research.

Effective staffing

Staff had the skills, knowledge and experience to deliver effective care and treatment.

- The practice had an induction programme for all newly appointed staff. This covered such topics as safeguarding, infection prevention and control, fire safety, health and safety and confidentiality.
- The practice could demonstrate how they ensured role-specific training and updating for relevant staff. For example, for those reviewing patients with long-term conditions.
- Staff administering vaccines and taking samples for the cervical screening programme had received specific training which had included an assessment of competence. Staff who administered vaccines could demonstrate how they stayed up to date with changes to the immunisation programmes, for example by access to on line resources and discussion at practice meetings.
- The learning needs of staff were identified through a system of appraisals, meetings and reviews of practice development needs. Staff had access to appropriate training to meet their learning needs and to cover the scope of their work. This included ongoing support, one-to-one meetings, clinical supervision and facilitation and support for revalidating GPs. All staff had received an appraisal within the last 12 months.
- Staff received training that included: safeguarding, fire safety awareness, basic life support and information governance. Staff had access to and made use of e-learning training modules and in-house training.

Coordinating patient care and information sharing

Are services effective?

(for example, treatment is effective)

The information needed to plan and deliver care and treatment was available to relevant staff in a timely and accessible way through the practice's patient record system and their intranet system.

- This included care and risk assessments, care plans, medical records and investigation and test results.
- The practice shared relevant information with other services in a timely way, for example when referring patients to other services.

Staff worked together and with other health and social care professionals to understand and meet the range and complexity of patients' needs and to assess and plan ongoing care and treatment. This included when patients moved between services, including when they were referred, or after they were discharged from hospital. Meetings took place with other health care professionals on a monthly basis when care plans were routinely reviewed and updated for patients with complex needs.

Consent to care and treatment

Staff sought patients' consent to care and treatment in line with legislation and guidance.

- Staff understood the relevant consent and decision-making requirements of legislation and guidance, including the Mental Capacity Act 2005. When providing care and treatment for children and young people, staff carried out assessments of capacity to consent in line with relevant guidance.
- Where a patient's mental capacity to consent to care or treatment was unclear the GP or practice nurse assessed the patient's capacity and, recorded the outcome of the assessment.
- The process for seeking consent was monitored through patient records audits.

Supporting patients to live healthier lives

The practice identified patients who may be in need of extra support. For example:

- Patients receiving end of life care, carers, the vulnerable, those at risk of developing a long-term condition and those requiring advice on their diet, smoking and alcohol cessation

The practice's uptake for the cervical screening programme was 79% which was comparable to the CCG average of 77% and the national average of 74%. There was a policy to offer telephone reminders for patients who did not attend for their cervical screening test. The practice demonstrated how they encouraged uptake of the screening programme by using information in different languages and for those with a learning disability and they ensured a female sample taker was available. There were failsafe systems in place to ensure results were received for all samples sent for the cervical screening programme and the practice followed up women who were referred as a result of abnormal results.

Childhood immunisation rates for the vaccinations given were comparable to CCG averages. For example, childhood immunisation rates for the vaccinations given to under two year olds ranged from 89% to 100% and five year olds from 91% to 95%. (CCG averages were 94% to 97% and 92% to 97%).

The practice also encouraged its patients to attend national screening programmes for bowel and breast cancer screening. The practice uptake for females being screened for breast cancer was 81% which was above the CCG average of 75% and was higher than the national average of 72. %. The patient uptake for bowel screening was also higher at 66% compared to the CCG average of 64% and the national average of 58%.

The practice healthcare assistant (HCA) had also identified 383 patients over the age of 75 years that were vulnerable and had carried out 170 assessments on the most vulnerable and isolated. These assessments were an evolving process and included identifying need in housing, physical health, mental health and social need and associated risks such as risk of falls or poor nutrition using a nationally recognised tool. The HCA liaised with dentists, opticians, housing departments and the practice GPs where areas of concern were identified. The practice also worked closely with local organisations to provide social events and lunch clubs. This initiative had reduced the hospital admissions for this age group by 33%.

Patients had access to appropriate health assessments and checks. These included health checks for new patients and NHS health checks for patients aged 40–74. Appropriate follow-ups for the outcomes of health assessments and checks were made, where abnormalities or risk factors were identified.

Are services caring?

Our findings

Kindness, dignity, respect and compassion

We observed members of staff were courteous and very helpful to patients and treated them with dignity and respect.

- Curtains were provided in consulting rooms to maintain patients' privacy and dignity during examinations, investigations and treatments.
- We noted that consultation and treatment room doors were closed during consultations; conversations taking place in these rooms could not be overheard.
- Reception staff knew when patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.

All of the 14 patient Care Quality Commission comment cards we received were positive about the service experienced. Patients said they felt the practice offered an excellent service and staff were helpful, caring and treated them with dignity and respect.

We spoke with two members of the patient participation group (PPG). They also told us they were satisfied with the care provided by the practice and said their dignity and privacy was respected. Comment cards highlighted that staff responded compassionately when they needed help and provided support when required.

Results from the national GP patient survey showed patients felt they were treated with compassion, dignity and respect. The practice was above average for its satisfaction scores on consultations with GPs and nurses. For example:

- 91% of patients said the GP was good at listening to them compared to the clinical commissioning group (CCG) average of 92% and the national average of 89%.
- 93% of patients said the GP gave them enough time compared to the CCG average of 92% and the national average of 87%.
- 98% of patients said they had confidence and trust in the last GP they saw compared to the CCG average of 97% and the national average of 95%.

- 91% of patients said the last GP they spoke to was good at treating them with care and concern compared to the national average of 85%.
- 94% of patients said the last nurse they spoke to was good at treating them with care and concern compared to the national average of 91%.
- 96% of patients said they found the receptionists at the practice helpful compared to the CCG average of 90% and the national average of 87%.

Care planning and involvement in decisions about care and treatment

Patients told us they felt involved in decision making about the care and treatment they received. They also told us they felt listened to and supported by staff and had sufficient time during consultations to make an informed decision about the choice of treatment available to them. Patient feedback from the comment cards we received was also positive and aligned with these views. We also saw that care plans were personalised.

Results from the national GP patient survey showed patients responded positively to questions about their involvement in planning and making decisions about their care and treatment. Results were in line with local and national averages. For example:

- 88.5% of patients said the last GP they saw was good at explaining tests and treatments compared to the CCG average of 90% and the national average of 86%.
- 83% of patients said the last GP they saw was good at involving them in decisions about their care compared to the national average of 82%.
- 92% of patients said the last nurse they saw was good at involving them in decisions about their care compared to the national average of 85%.

The practice provided facilities to help patients be involved in decisions about their care:

- Staff told us that translation services were available for patients who did not have English as a first language. We saw notices in the reception areas informing patients this service was available.
- Information leaflets were available in easy read format.

Patient and carer support to cope emotionally with care and treatment

Are services caring?

Patient information leaflets and notices were available in the patient waiting area which told patients how to access a number of support groups and organisations. Information about support groups was also available on the practice website.

The practice's computer system alerted GPs if a patient was also a carer. The practice had identified 85 patients as carers, (about 2.3% of the practice list), two were young people.

- The practice had carers lead who carried out annual health checks that also included an emergency plan should the carer needed to be hospitalised for example.
- The carers lead was able to advise patients with regards to accessing advice and support for carers. This included accessing appointments at more suitable times when they were able to leave the person they cared for or home visits if required.

- The practice offered the carer a seasonal flu vaccination under the NHS.
- The practice recognised that carers were at high risk of stress and depression and at regular intervals contacted carers to check on their wellbeing and to offer support and help reduce feelings of isolation.
- Written information was available to direct carers to the various avenues of support available to them.

Staff told us that if families had suffered bereavement, their usual GP contacted them or sent them a sympathy card. This call was either followed by a patient consultation at a flexible time and location to meet the family's needs and/or by giving them advice on how to find a support service.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

Responding to and meeting people's needs

The practice reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group (CCG) to secure improvements to services where these were identified.

- The practice offered additional appointments on a Monday and Wednesday morning and Monday and Thursday evening patients who could not attend during normal opening hours.
- There were longer appointments available for patients with a learning disability, older patients and patients with complex conditions or multiple ailments.
- Home visits were available for older patients and patients who had clinical needs which resulted in difficulty attending the practice.
- Same day appointments were available for children and those patients with medical problems that require same day consultation.
- Patients were able to receive travel vaccinations available on the NHS as well as those only available privately.
- There were disabled facilities, a hearing loop and translation services available.
- A representative from the Citizen Advice Bureau was available every Tuesday morning.

Access to the service

The practice reception was open between 8am and 6.30pm Monday to Friday. Appointments were available from 8.30am to 12.30pm and 2pm to 6pm daily. Extended hours appointments were offered on Monday and Wednesday mornings and Monday and Thursday evenings. In addition to pre-bookable appointments that could be booked up to six weeks in advance, urgent appointments were also available for people that needed them. The practice held open clinics on a Wednesday as well as the day after a Bank Holiday and between Christmas and New Year. Open clinics were a sit and wait, but all patients were seen.

Results from the national GP patient survey showed that patient's satisfaction with how they could access care and treatment was comparable to local and national averages.

- 67% of patients were satisfied with the practice's opening hours compared to the national average of 78%.
- 95% of patients said they could get through easily to the practice by phone compared to the national average of 73%.

The practice responded to the lower percentage of satisfaction with the practice opening times by providing additional appointments on a Wednesday afternoon.

People told us on the day of the inspection that they were able to get appointments when they needed them.

The practice had a system in place to assess:

- whether a home visit was clinically necessary; and
- the urgency of the need for medical attention.

by telephoning the patient or carer in advance to gather information to allow for an informed decision to be made on prioritisation according to clinical need. In cases where the urgency of need was so great that it would be inappropriate for the patient to wait for a GP home visit, alternative emergency care arrangements were made. Clinical and non-clinical staff were aware of their responsibilities when managing requests for home visits.

Listening and learning from concerns and complaints

The practice had an effective system in place for handling complaints and concerns. The complaints policy and procedures were in line with recognised guidance and contractual obligations for GPs in England. There was a designated responsible person who handled all complaints in the practice.

We saw that information was available to help patients understand the complaints system. There was a poster and leaflets displayed in the waiting room explaining how to complain should patients wish to do so.

We looked at 10 complaints received in the last 12 months and found these were satisfactorily handled, dealt with in a timely way, showing openness and transparency in dealing with the complaint. The practice reviewed complaints annually to detect themes or trends. We looked at the report for the last review and no themes had been identified. However, lessons learned from individual complaints had been acted on and improvements made to the quality of care as a result.

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

Our findings

Vision and strategy

The practice had a clear vision to deliver high quality care and promote good outcomes for patients.

- The practice had a mission statement which was displayed in the waiting areas and staff knew and understood the values.
- The practice had a robust strategy and supporting business plans which reflected the vision and values and were regularly monitored.

Governance arrangements

The practice had an overarching governance framework which supported the delivery of the strategy and good quality care. This outlined the structures and procedures in place and ensured that:

- There was a clear staffing structure and that staff were aware of their own roles and responsibilities.
- Practice specific policies were implemented and were available to all staff.
- A comprehensive understanding of the performance of the practice was maintained
- A programme of continuous clinical and internal audit was used to monitor quality and to make improvements.
- There were robust arrangements for identifying, recording and managing risks, issues and implementing mitigating actions.

Leadership and culture

On the day of inspection the partners in the practice demonstrated they had the experience, capacity and capability to run the practice and ensure high quality care. They told us they prioritised safe, high quality and compassionate care. Staff told us the partners were approachable and always took the time to listen to all members of staff.

The provider was aware of and had systems in place to ensure compliance with the requirements of the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when things go wrong with care and treatment). This included

support training for all staff on communicating with patients about notifiable safety incidents. The partners encouraged a culture of openness and honesty. The practice had systems in place to ensure that when things went wrong with care and treatment:

- The practice gave affected people reasonable support, truthful information and a verbal and written apology
- The practice kept written records of verbal interactions as well as written correspondence.

There was a clear leadership structure in place and staff felt supported by management.

- Staff told us the practice held regular staff meetings.
- Staff told us there was an open culture within the practice and they had the opportunity to raise any issues at team meetings and felt confident and supported in doing so.
- Staff said they felt respected, valued and supported, particularly by the partners in the practice. All staff were involved in discussions about how to run and develop the practice, and the partners encouraged all members of staff to identify opportunities to improve the service delivered by the practice.

Seeking and acting on feedback from patients, the public and staff

The practice encouraged and valued feedback from patients, the public and staff. It proactively sought patients' feedback and engaged patients in the delivery of the service.

- The practice had gathered feedback from patients through the patient participation group (PPG) and through surveys and complaints received. The PPG met regularly, carried out patient surveys, and attended local events to gain feedback and submitted proposals for improvements to the practice management team. The PPG were fully engaged with the practice and were present at the presentation that the practice were requested to give at the beginning of the inspection. They told us how they engaged with the staff and were involved with promoting the practice within the community and gaining feedback both formally through surveys and informally through general discussion.
- The practice had gathered feedback from staff generally through staff meetings, appraisals and discussion. Staff

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

told us they would not hesitate to give feedback and discuss any concerns or issues with colleagues and management Staff told us they felt involved and engaged to improve how the practice was run.

Continuous improvement

There was a focus on continuous learning and improvement at all levels within the practice. The practice team was forward thinking and part of local pilot schemes to improve outcomes for patients in the area.

The practice had monthly training sessions to cover mandatory topics and areas of interest.
